

Equity Insight Ticker User Guide

The goal of *Equity Insight Ticker* is simple; deliver our clients quick and effective trade ideas to their desktop each day. We provide specific entry and stop loss prices with each recommendation and will alert you when to exit the trade too.

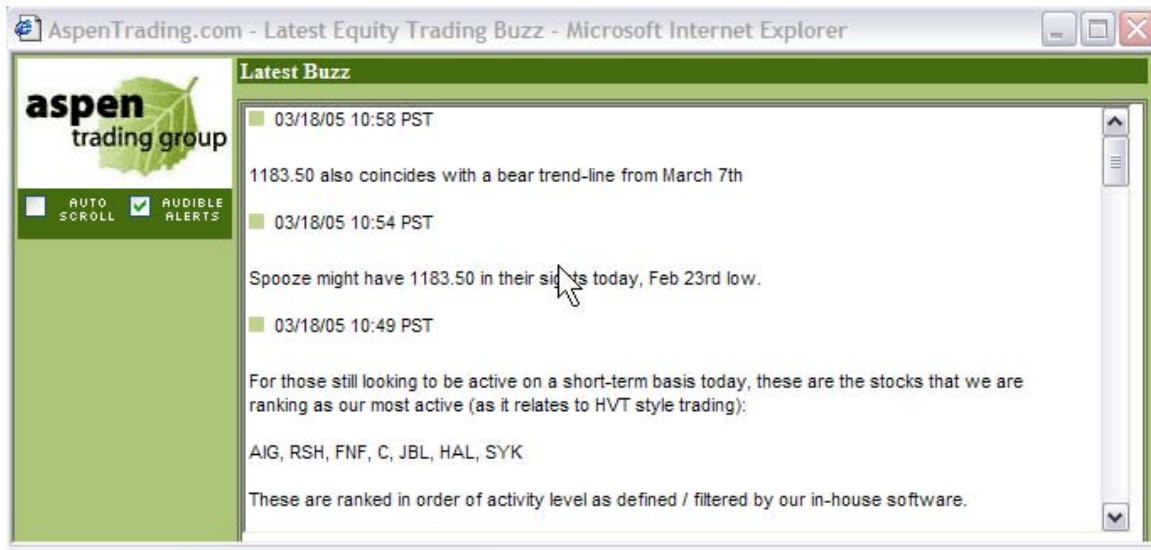

The main screen of the service can be found at this web address, <http://www.aspentrading.com/equitytradeideas.htm>, then click on the Member Login button

and type in your **User Name** and **Password**. You will then be at this window:

You can monitor Equity Insight Ticker from this page, or should you choose, you can launch it as a stand-alone application should you choose so as to integrate it in with your other trading applications.

Simply click on the text box titled [VIEW LATEST BUZZ AS A POPUP](#) and a resizable java applet will run on your desktop separate from the web page. The “pop-up” version has the ability to scroll the headlines as well as provide an audio alert when any new posting appears in the ticker. The ticker will update automatically, there is no need to refresh the screen.

The key feature is that all information is posted in real-time without the delays associated with email alerts.

In the *Equity Insight Ticker*, we report the following:

- New trade alerts as noted by the heading **New Intra-Day Trade or New Long-Term Trade.**
- Each morning we will provide key technical levels for the S&P 500 futures as well as any technical developments worth noting.
- Hyperlinks to charts that point out the technical patterns and conditions on open positions.

If you have any questions, please feel free to contact us or send an email to questions@aspen trading.com

Regards,

Dave Floyd
